Ref: MASTO HIGH PRESSURE WIRE LUBRICATOR

After having used the MASTO unit for approximately $2\frac{1}{2}$ years, we are more than satisfied with the unit. It is a clean and efficient way of greasing wires.

Before we got the unit, greasing wires was a hard task, but now the unit is doing the work for us and the wires are greased properly and evenly.

In our eyes the life-span of the wires has also extended by approx. 100-200%.

This is our experience with the MASTO High Pressure Wire Lubricator here on the Statfjord "B" platform, and we will give our highest recommendation.
